

Quick assembly instructions
for DS / OBD locator

 **DS locate**

PASSENGER / DELIVERY CAR

1.

Prepare the locating device and open the door on the driver's side.

2.

Find OBD connector. Most often it is found under the dashboard on the driver's side, above the pedals.

3.

If the OBD connector has a cap, open it and check which way plugs are positioned.

4.

Plug the device to the OBD connector. Make sure that the locator is not covered with any metal cover, (for example OBD placed under driver's seat). In that case the device may not work correctly.

In order to verify the correctness of the device installation and receiving alerts from e-TOLL system, log in to the **DS Locate** application. You can download it for free from the **Google Play** or **AppStore**.

We have sent the login access data to your e-mail address. If you have not received your access data, please contact us by writing a message to the following address: **pomoc.techniczna@datasystem.pl**.
